

Burgopak, Packaging For Better.

People often associate the word, 'packaging' with a dull, brown, utilitarian box that's only job is to get something from A to B. And if that's what you're looking for, then we probably aren't the people.

Our main interest is around the experience that packaging can create for customers. Whether it's infusing delight into the opening, segmenting the unboxing with useful instructions or maximising perceived value while using as little material as possible, our mission is to transform the boring old box into something far, far better.

We believe that packaging has a bright future. That responsible doesn't mean dull and premium doesn't mean over-packaged. We believe that with the right approach you can innovate responsibly.

Our, 'packaging for better' mission focusses on making continual improvements to all areas of our products. From the way they are designed to the materials used and the way they are manufactured, we aim to make good design not only affordable but a valuable and responsible investment.

Frequently Asked Questions

Is your packaging recyclable?

Yes. And although some of our designs are powered by a super thin plastic band, this does not affect them being recycled. The band is simply separated during the repulping process.

Can we use recycled card?

Using recycled paper is possible within Europe but it may be subject to longer lead-times, be more expensive or of a lower quality. Our general recommendation is to use paper from responsibly managed forests and we have worked hard to standardise the best examples throughout our supply chain. For additional peace of mind we can also offer FSC™ certified stock on request.

What inks and finishes should I use?

Our general recommendations are:

- Use aqueous varnish instead of laminate .
- Use less than 50% coverage for foil and spot UV.
- Use water-based or vegetable-based inks.

What is FSC™ certified paper?

FSC™ (Forestry Stewardship Council™) is an independent organisation that audits the sustainable management of forests and wood-based products. FSC™ certified paper generally uses virgin pulp made from trees that come from responsibly managed, sustainable sources. It is available as an option on all standard materials from our global production sites as well as on a wide-range of specialist papers.

Where do you manufacture?

We manufacture in the UK, Poland, Czech Rep, Ukraine, USA, China, India.

What accreditations do your plants hold?

Collectively, our manufacturing locations hold the following accreditations: REACH, FSC™, PEFC, BRC, SEDEX ISO9001, ISO14001, ISO22000, ISO18001, ISO45001, SA8000, PS9000. Certification copies available on request. If you have a specific requirement, please contact your project manager so that we can determine the most appropriate manufacturing facility.
